RE: Discharge from Underground Storage Tank System
Golf Course Maintenance Bldg., Bldg. #2044
Fort Monmouth, Monmouth County
Case #93-06-28-1009 UST #00192486

AUG 6 1993

Dear Mr. Appleby:

On June 28, 1993, the New Jersey Department of Environmental Protection and Energy ("Department") received notification of a discharge of hazardous substances from (an) underground storage tank (s) at the above referenced facility which is/are regulated under the Underground Storage of Hazardous Substances Act (N.J.S.A. 58:10A-21 et seq). One (1) 550 gallon gasoline and one (1) 550 gallon diesel fuel tanks were suspected of discharge from soil samples.

The "Technical Requirements for Site Remediation" rules (N.J.A.C. 7:26E) appeared in the June 7, 1993 New Jersey Register and became effective July 1, 1993. These rules contain the minimum technical requirements concerning the environmental investigation and remediation at contaminated sites or sites at which contamination is suspected. These rules are being used as the Department's primary technical document, replacing the Division of Responsible Party Site Remediation's Remedial Investigation Guide, the ECRA Cleanup Plan Guide, the Bureau of Underground Storage Tanks'(BUST) Scope of Work document (and appendices) and the BUST Technical Guidance Document. A copy of these rules can be obtained from your local library or through the Office of Administrative Law Publications at (609) 588-6606.

The guidance provided in the rules should be utilized in the implementation of a Remedial Investigation (RI) and the preparation of an RI Report. The RI Report should replace the Discharge Investigation and Corrective Action Report (DICAR) which was previously requested by BUST. The purpose of the RI is to: a) characterize and delineate the full extent of all soil and ground water contamination noted during the Preliminary Assessment (PA) and Site Investigation (SI) phase; b) determine the general surface and subsurface conditions; c) determine migration paths and actual/potential receptors; and d) analyze all information for the selection of the remedial action alternative.

Rec'd 8/11/93 AK
