Re: *Letter Work Plan Addendum for Phase 2 Remedial Investigation at FTMM-68*
Fort Monmouth
Oceanport, Monmouth County
PI G000000032

Dear Mr. Colvin:

The New Jersey Department of Environmental Protection (Department) has completed review of the referenced submittal, received on October 3, 2016. The Work Plan Addendum is acceptable with comments, as below.

The workplan states that the proposed permanent wells will be installed with 10 feet of screen and that low-flow sampling methodology will be conducted. If the saturated screen length is 10 feet, then the well must be sampled every 5 feet per the Department's Field Sampling Procedures Guidance Document.

The proposal indicates that an estimated maximum of 25 grab samples will be obtained from 10 geoprobes. Table 2 states that 2 to 3 samples will be obtained from each geoprobe location. Assuming that 3 samples will be obtained from each geoprobe for profiling purposes, that would be a maximum of 30 ground water samples, rather than 25 samples.

Please contact this office with any questions.

Sincerely,

Linda S. Range
