Re: Proposed Temporary Groundwater Sampling Plan for Parcel 38 Former Outdoor Pistol Range (1940-1955) - Main Post – Dated July 26, 2012
Fort Monmouth, New Jersey
PI G000000032

Dear Ms. Green:

The New Jersey Department of Environmental Protection (Department) has completed review of the referenced submittal.

Surface soil samples, 25 total, were collected in December 2007 and analyzed for TAL metals. Soil sample analytical results were below soil cleanup criteria, however, due to reworking of the soil in the area performed prior to sampling, it was determined investigation of the ground water in the area was required. The installation and sampling of seven temporary well points is proposed; each is to be sampled for lead analysis.

The ground water investigation as proposed is acceptable.

Please contact this office if you have any questions.

Sincerely,

Linda S. Range
Bureau of Case Management
